ELSEVIER

Thin Solid Films 253 (1994) 537–543

thin solid films

Subject Index of Volume 253

Adhesion
effects of hydrogen annealing, sulfur segregation and diffusion on the cyclic oxidation resistance of superalloys: a review, 285
mechanical property characterization of thin films using spherical tipped indenters, 204
pin-pull adhesion measurements of copper films on ion-bombarded alumina, 362
Adsorption
atomic-scale friction measurements of silver and chemisorbed oxygen surfaces, 190
Alloys
kinetics of Ni/a-Ge bilayer reactions, 456
Aluminium
Al planarization processes for multilayer metallization of quarter micrometer devices, 367
Aluminium nitride
effects of ion beam irradiation on the properties and epitaxial growth of aluminium nitride film by the ion beam assisted deposition process, 47
microstructure and thermal conductivity of epitaxial AlN thin films, 223
Aluminium oxide
electrostatic-based model for alumina surfaces, 179
microstructural investigation of the κ-$Al_2O_3 \rightarrow \alpha$-$Al_2O_3$ transformation in multilayer coatings of chemically vapour deposited κ-Al_2O_3, 311
new interpretation of the binding energies in X-ray photoelectron studies of oxides, 277
pin-pull adhesion measurements of copper films on ion-bombarded alumina, 362
Amorphous materials
amorphous Si thin films prepared by vacuum arc deposition, 62
elastic modulus of diamond-like carbon films prepared by pulsed vacuum arc, 125
optical quantum size effects in diamond-like carbon superlattice structures, 20
use of space-charge-limited current to evaluate the electronic density of states in diamond-like carbon thin films, 146
Annealing
annealing and Sb-doping of Sn–O films produced by filtered vacuum arc deposition: structure and electro-optical properties, 1
opening and closing of channels during phase transitions in Al–Mn thin films, 254
Atomic force microscopy
advanced image processing in scanning probe microscopy, 318
aspects of the surface roughness of ceramic bonding tools on a nanometer scale investigated with atomic force microscopy, 308
microstructure and thermal conductivity of epitaxial AlN thin films, 223
modelling of surface roughness in variable-angle spectroscopic ellipsometry, using numerical processing of atomic force microscopy images, 326
plastic deformation in atomic size contacts, 199
triboscopic description of local wear phenomena under an AFM tip, 194
Auger electron spectroscopy
carbon nitride formation by low-energy nitrogen implantation into graphite, 90
interfacial reactions in dynamically heated Si/Me/Si sandwich layers, 293
use of valence band Auger electron spectroscopy to study thin film growth: oxide and diamond-like carbon films, 269

Band structure
photoacoustic studies of laser damage in oxide thin films, 333
Binding energy
new interpretation of the binding energies in X-ray photoelectron studies of oxides, 277
Boron
comparative study of trimethylboron doping of hot filament chemically vapour deposited and microwave plasma chemically vapour deposited diamond films, 136
properties of boron coatings used as plasma facing material of fusion device, 518
Boron nitride
characterization of laser-ablated boron nitride thin films on silicon, 243
cross-section transmission electron microscopy observations of c-BN films deposited on Si by ion-beam-assisted deposition, 72
effects of ambient conditions on the adhesion of cubic boron nitride films on silicon substrates, 130
synthesis and structural characterization of boron nitride thin films, 78

Cadmium telluride
investigations on n-CdO/p-CdTe thin film heterojunctions, 339
Capacitors
effects of substrate and annealing ambient on the electrical properties of Ta_2O_5 thin films prepared by plasma enhanced chemical vapor deposition, 435
Carbon
carbon nitride formation by low-energy nitrogen implantation into graphite, 90
diamond coatings from a solid carbon source, 95
elastic modulus of diamond-like carbon films prepared by pulsed vacuum arc, 125
modified Forouhi and Bloomer dispersion model for the optical constants of amorphous hydrogenated carbon thin films, 57
optical quantum size effects in diamond-like carbon superlattice structures, 20

Elsevier Science S.A.

physical properties of nitrogenated amorphous carbon films produced by ion-beam-assisted deposition, 85
use of space-charge-limited current to evaluate the electronic density of states in diamond-like carbon thin films, 146
Carbon dioxide
study of the loss of pattern definition in diamond growth, 168
Ceramics
$Ba_xSr_{1-x}TiO_3$ thin films by a chemical process, 53
Charging
new interpretation of the binding energies in X-ray photoelectron studies of oxides, 277
Chemical vapour deposition
Au/(Ti–W) and Au/Cr metallization of chemically vapor-deposited diamond substrates for multichip module applications, 407
chemical vapor deposition of $TiSi_2$ using SiH_4 and $TiCl_4$, 473
deposition of white diamond thin films by increasing the total pressure in a microwave-plasma-enhanced chemical vapour deposition system, 109
effect of impurities on the IR absorption of chemically vapour deposited diamond, 157
electrical properties of diamond thin films grown by chemical vapor deposition technique, 141
fabrication of an electron multiplier utilizing diamond films, 151
internal stress of chemical vapour deposition diamond film on silicon, 119
optical characterization of diamond synthesized using CH_4–CO_2 gas mixtures without supplying hydrogen gas, 162
optimizing the gas phase chemistry in a d.c. arcjet diamond chemical vapor deposition reactor, 103
preparation of milky transparent conducting ZnO films with textured surface by atmospheric chemical vapour desposition using $Zn(C_5H_7O_2)_2$, 14
study of the loss of pattern definition in diamond growth, 168
use of space-charge-limited current to evaluate the electronic density of states in diamond-like carbon thin films, 146
Clusters
gold and zinc thin films deposited by the ionized cluster beam technique, 402
Coatings
advanced image processing in scanning probe microscopy, 318
$Ba_xSr_{1-x}TiO_3$ thin films by a chemical process, 53
coatings tribology: a concept, critical aspects and future directions, 173
effects of activated reactive evaporation process parameters on the microhardness of polycrystalline silicon carbide thin films, 212
effects of ambient conditions on the adhesion of cubic boron nitride films on silicon substrates, 130
mechanical property characterization of thin films using spherical tipped indenters, 204
modelling of surface roughness in variable-angle spectroscopic ellipsometry, using numerical processing of atomic force microscopy images, 326
numerical ellipsometry: enhancement of new algorithms for real-time, in situ film growth monitoring, 262
Cobalt
high resistivity Co and Ti silicide formation on silicon-on-insulator substrates, 462
triboscopic description of local wear phenomena under an AFM tip, 194
Computer simulation
effects of collimation on intrinsic stress in sputter-deposited metallic thin films, 372
electrostatic-based model for alumina surfaces, 179
molecular dynamics simulations of friction in self-assembled monolayers, 185
transport through multicomponent dual frequency plasma sheaths, 522
Conductivity
a.c. properties of ZnO thin films prepared by r.f. magnetron sputtering, 529
Contacts
high resistivity Co and Ti silicide formation on silicon-on-insulator substrates, 462
morphology of Al–Ni–Ge ohmic contacts to n-GaAs as a function of contact composition, 490
non-alloyed, refractory metal contact optimization with shallow implantations of Zn and Mg, 496
Copper
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source, 382
pin-pull adhesion measurements of copper films on ion-bombarded alumina, 362
selective electroless copper plating on silicon seeded by copper ion implantation, 391

Deposition process
amorphous Si thin films prepared by vacuum arc deposition, 62
annealing and Sb-doping of Sn–O films produced by filtered vacuum arc deposition: structure and electro-optical properties, 1
$Ba_xSr_{1-x}TiO_3$ thin films by a chemical process, 53
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source, 382
effects of ion beam irradiation on the properties and epitaxial growth of aluminium nitride film by the ion beam assisted deposition process, 47
laser-assisted deposition of optical coatings, 28
physical properties of nitrogenated amorphous carbon films produced by ion-beam-assisted deposition, 85
preparation of conductive ZnO:Al films by a facing target system with a strong magnetic field, 9
spatially resolved densification of solution deposited zirconium dioxide films by laser irradiation, 41
surface morphology examination of sol–gel deposited TiO_2 films, 303
TiN-capped $TiSi_2$ formation in W/$TiSi_2$ process for a quarter-micron complementary metal–oxide–semiconductor, 395
Depth profiling
interfacial reactions in dynamically heated Si/Me/Si sandwich layers, 293
residual stress distribution in electroplated Zn–Ni alloy layer determined by X-ray diffraction, 356
Diamond
Au/(Ti–W) and Au/Cr metallization of chemically vapor-deposited diamond substrates for multichip module applications, 407
comparative study of trimethylboron doping of hot filament chemically vapour deposited and microwave plasma chemically vapour deposited diamond films, 136
deposition of white diamond thin films by increasing the total pressure in a microwave-plasma-enhanced chemical vapour deposition system, 109
diamond coatings from a solid carbon source, 95
effect of impurities on the IR absorption of chemically vapour deposited diamond, 157

electrical properties of diamond thin films grown by chemical vapor deposition technique, 141
fabrication of an electron multiplier utilizing diamond films, 151
internal stress of chemical vapour deposition diamond film on silicon, 119
nucleation studies of thin diamond films on model substrates, 114
optical characterization of diamond synthesized using CH_4–CO_2 gas mixtures without supplying hydrogen gas, 162
optimizing the gas phase chemistry in a d.c. arcjet diamond chemical vapor deposition reactor, 103
study of the loss of pattern definition in diamond growth, 168
use of valence band Auger electron spectroscopy to study thin film growth: oxide and diamond-like carbon films, 269
Dielectric properties
a.c. properties of ZnO thin films prepared by r.f. magnetron sputtering, 529
Dielectrics
numerical simulations of thin film thermal flow, 419
Diffusion
interfacial reactions in dynamically heated Si/Me/Si sandwich layers, 293

Elastic properties
elastic modulus of diamond-like carbon films prepared by pulsed vacuum arc, 125
mechanical property characterization of thin films using spherical tipped indenters, 204
plastic deformation in atomic size contacts, 199
Electrical properties and measurements
a.c. properties of ZnO thin films prepared by r.f. magnetron sputtering, 529
characterization of p-$CuGa_{0.25}In_{0.75}Se_2$/n-$Zn_{0.35}Cd_{0.65}S$ polycrystalline thin film heterojunctions, 67
characterization of thin film ZnO/ZnCdS/$CuGaAse_2$ heterojunctions, 238
effects of electro- and stress migration forces on the $1/f\alpha$ noise of patterned thin metal films, 513
effects of substrate and annealing ambient on the electrical properties of Ta_2O_5 thin films prepared by plasma enhanced chemical vapor deposition, 435
electrical properties of diamond thin films grown by chemical vapor deposition technique, 141
electrical properties of the p^+-gate electrode of an a-Si/poly-Si double layer, 413
formation of low pressure chemically vapour deposited W thin film on silicon dioxide for gate electrode application, 377
investigations on n-CdO/p-CdTe thin film heterojunctions, 339
use of space-charge-limited current to evaluate the electronic density of states in diamond-like carbon thin films, 146
Electromigration
effects of electro- and stress migration forces on the $1/f\alpha$ noise of patterned thin metal films, 513
realistic electromigration lifetime projection of VLSI interconnects, 508
Electron diffraction
high resistivity Co and Ti silicide formation on silicon-on-insulator substrates, 462
Electron energy loss spectroscopy
characterization of TiO_2/SiO_2 multilayers by high resolution transmission electron microscopy and electron energy loss spectroscopy, 299
Electron microscopy
characterization of TiO_2/SiO_2 multilayers by high resolution transmission electron microscopy and electron energy loss spectroscopy, 299
microstructural investigation of the κ-$Al_2O_3 \rightarrow \alpha$-$Al_2O_3$ transformation in multilayer coatings of chemically vapour deposited κ-Al_2O_3, 311
opening and closing of channels during phase transitions in Al–Mn thin films, 254
thickness dependence of the properties and thermal stability of PtSi films, 467
Electronic devices
electrical and structural properties of buried $CoSi_2$ layers in Si(100) grown by molecular beam allotaxy, 485
fabrication of an electron multiplier utilizing diamond films, 151
Ellipsometry
growth of low and high refractive index dielectric layers as studied by in situ ellipsometry, 257
modelling of surface roughness in variable-angle spectroscopic ellipsometry, using numerical processing of atomic force microscopy images, 326
modified Forouhi and Bloomer dispersion model for the optical constants of amorphous hydrogenated carbon thin films, 57
numerical ellipsometry: enhancement of new algorithms for real-time, in situ film growth monitoring, 262
optical analysis of complex multilayer structures using multiple data types, 25
Epitaxy
electrical and structural properties of buried $CoSi_2$ layers in Si(100) grown by molecular beam allotaxy, 485
enhanced mechanical hardness in compositionally modulated Fe(001)/Pt(001) and Fe(001)/Cr(001) epitaxial thin films, 218
microstructure and thermal conductivity of epitaxial AlN thin films, 223
Etching
development of a gate metal etch process for gallium arsenide wafers, 501
Ethylene
atomic-scale friction measurements of silver and chemisorbed oxygen surfaces, 190
Evaporation
effects of activated reactive evaporation process parameters on the microhardness of polycrystalline silicon carbide thin films, 212

Factor analysis
use of valence band Auger electron spectroscopy to study thin film growth: oxide and diamond-like carbon films, 269
Fluorescence
spatially resolved densification of solution deposited zirconium dioxide films by laser irradiation, 41
Fluorine
growth of low and high refractive index dielectric layers as studied by in situ ellipsometry, 257
Fourier transform infrared spectroscopy
optical characterization of diamond synthesized using CH_4–CO_2 gas mixtures without supplying hydrogen gas, 162

Gallium arsenide
development of a gate metal etch process for gallium arsenide wafers, 501

morphology of Al–Ni–Ge ohmic contacts to n-GaAs as a function of contact composition, 490
non-alloyed, refractory metal contact optimization with shallow implantations of Zn and Mg, 496
Germanium
kinetics of Ni/a-Ge bilayer reactions, 456
Glass
modelling of surface roughness in variable-angle spectroscopic ellipsometry, using numerical processing of atomic force microscopy images, 326
numerical simulations of thin film thermal flow, 419
Glow discharge
properties of boron coatings used as plasma facing material of fusion device, 518
Gold
Au/(Ti–W) and Au/Cr metallization of chemically vapor-deposited diamond substrates for multichip module applications, 407
gold and zinc thin films deposited by the ionized cluster beam technique, 402
Graphite
carbon nitride formation by low-energy nitrogen implantation into graphite, 90
nucleation studies of thin diamond films on model substrates, 114
Growth mechanism
aspects of the surface roughness of ceramic bonding tools on a nanometer scale investigated with atomic force microscopy, 308
chemical vapor deposition of $TiSi_2$ using SiH_4 and $TiCl_4$, 473
opening and closing of channels during phase transitions in Al–Mn thin films, 254
optimizing the gas phase chemistry in a d.c. arcjet diamond chemical vapor deposition reactor, 103

Hardness
coatings tribology: a concept, critical aspects and future directions, 173
effects of activated reactive evaporation process parameters on the microhardness of polycrystalline silicon carbide thin films, 212
enhanced mechanical hardness in compositionally modulated Fe(001)/Pt(001) and Fe(001)/Cr(001) epitaxial thin films, 218
mechanical property characterization of thin films using spherical tipped indenters, 204
microstructure and mechanical properties of sputtered platinum films, 344
Heat treatment
opening and closing of channels during phase transitions in Al–Mn thin films, 254
Heterostructures
investigations on n-CdO/p-CdTe thin film heterojunctions, 339
Hydrocarbons
modified Forouhi and Bloomer dispersion model for the optical constants of amorphous hydrogenated carbon thin films, 57

Impurities
effect of impurities on the IR absorption of chemically vapour deposited diamond, 157
Infrared spectroscopy
effect of impurities on the IR absorption of chemically vapour deposited diamond, 157
synthesis and structural characterization of boron nitride thin films, 78
Interfaces
cross-section transmission electron microscopy observations of c-BN films deposited on Si by ion-beam-assisted deposition, 72
interfacial reactions in dynamically heated Si/Me/Si sandwich layers, 293
Ion bombardment
bombardment and gas rarefaction effects on the properties of sputtered Ti thin films, 386
carbon nitride formation by low-energy nitrogen implantation into graphite, 90
cross-section transmission electron microscopy observations of c-BN films deposited on Si by ion-beam-assisted deposition, 72
effects of ion beam irradiation on the properties and epitaxial growth of aluminium nitride film by the ion beam assisted deposition process, 47
physical properties of nitrogenated amorphous carbon films produced by ion-beam-assisted deposition, 85
pin-pull adhesion measurements of copper films on ion-bombarded alumina, 362
single-phase polycrystalline $Ti_{1-x}W_xN$ alloys ($0 \leq x \leq 0.7$) grown by UHV reactive magnetron sputtering: microstructure and physical properties, 445
Ion implantation
electrical properties of the p^+-gate electrode of an a-Si/poly-Si double layer, 413
non-alloyed, refractory metal contact optimization with shallow implantations of Zn and Mg, 496
selective electroless copper plating on silicon seeded by copper ion implantation, 391
Ion scattering
atmosphere influence on in-situ ion beam analysis of thin film growth, 247
transport through multicomponent dual frequency plasma sheaths, 522

Laser ablation
characterization of laser-ablated boron nitride thin films on silicon, 243
photoacoustic studies of laser damage in oxide thin films, 333
Laser irradiation
laser-assisted deposition of optical coatings, 28
spatially resolved densification of solution deposited zirconium dioxide films by laser irradiation, 41

Metallization
Al planarization processes for multilayer metallization of quarter micrometer devices, 367
Au/(Ti–W) and Au/Cr metallization of chemically vapor-deposited diamond substrates for multichip module applications, 407
comparison of chemical vapor deposition of TiN using tetrakis-diethylamino-titanium and tetrakis-dimethylamino-titanium, 440
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source, 382
effect of dimension sealing on the nucleation of C54 $TiSi_2$, 451
effects of electro- and stress migration forces on the $1/f\alpha$ noise of patterned thin metal films, 513
morphology of Al–Ni–Ge ohmic contacts to n-GaAs as a function of contact composition, 490

realistic electromigration lifetime projection of VLSI interconnects, 508
Metals
enhanced mechanical hardness in compositionally modulated Fe(001)/Pt(001) and Fe(001)/Cr(001) epitaxial thin films, 218
plastic deformation in atomic size contacts, 199
Methane
internal stress of chemical vapour deposition diamond film on silicon, 119
study of the loss of pattern definition in diamond growth, 168
Monolayers
molecular dynamics simulations of friction in self-assembled monolayers, 185
Multilayers
enhanced mechanical hardness in compositionally modulated Fe(001)/Pt(001) and Fe(001)/Cr(001) epitaxial thin films, 218

Nanostructures
aspects of the surface roughness of ceramic bonding tools on a nanometer scale investigated with atomic force microscopy, 308
plastic deformation in atomic size contacts, 199
Nickel
kinetics of Ni/a-Ge bilayer reactions, 456
numerical ellipsometry: enhancement of new algorithms for real-time, in situ film growth monitoring, 262
Nitrides
decorative optical coatings, 33
Nucleation
effect of dimension sealing on the nucleation of C54 $TiSi_2$, 451
formation of low pressure chemically vapour deposited W thin film on silicon dioxide for gate electrode application, 377
nucleation studies of thin diamond films on model substrates, 114

Optical coatings
growth of low and high refractive index dielectric layers as studied by in situ ellipsometry, 257
laser-assisted deposition of optical coatings, 28
optical characterization of diamond synthesized using CH_4–CO_2 gas mixtures without supplying hydrogen gas, 162
photoacoustic studies of laser damage in oxide thin films, 333
preparation of conductive ZnO:Al films by a facing target system with a strong magnetic field, 9
Optical properties
characterization of p-$CuGa_{0.25}In_{0.75}Se_2$/n-$Zn_{0.35}Cd_{0.65}S$ polycrystalline thin film heterojunctions, 67
characterization of thin film ZnO/ZnCdS/$CuGaSe_2$ heterojunctions, 238
decorative optical coatings, 33
emittance characterization of thermal control paints, coatings and surfaces using a calorimetric technique, 233
modified Forouhi and Bloomer dispersion model for the optical constants of amorphous hydrogenated carbon thin films, 57
numerical ellipsometry: enhancement of new algorithms for real-time, in situ film growth monitoring, 262
optical quantum size effects in diamond-like carbon superlattice structures, 20
Optical spectroscopy
holographic and spectroscopic characterization of spiropyran doped poly(methyl methacrylate) films, 228
Organometallic vapour deposition
comparison of chemical vapor deposition of TiN using tetrakis-diethylamino-titanium and tetrakis-dimethylamino-titanium, 440
Oxidation
effects of hydrogen annealing, sulfur segregation and diffusion on the cyclic oxidation resistance of superalloys: a review, 285
new interpretation of the binding energies in X-ray photoelectron studies of oxides, 277
properties of boron coatings used as plasma facing material of fusion device, 518
use of valence band Auger electron spectroscopy to study thin film growth: oxide and diamond-like carbon films, 269
Oxides
$Ba_xSr_{1-x}TiO_3$ thin films by a chemical process, 53
laser-assisted deposition of optical coatings, 28

Phase transitions
effect of dimension sealing on the nucleation of C54 $TiSi_2$, 451
microstructural investigation of the κ-$Al_2O_3 \rightarrow \alpha$-$Al_2O_3$ transformation in multilayer coatings of chemically vapour deposited κ-Al_2O_3, 311
spatially resolved densification of solution deposited zirconium dioxide films by laser irradiation, 41
TiN-capped $TiSi_2$ formation in W/$TiSi_2$ process for a quarter-micron coplementary metal–oxide–semiconductor, 395
Physical vapour deposition
decorative optical coatings, 33
effects of collimation on intrinsic stress in sputter-deposited metallic thin films, 372
gold and zinc thin films deposited by the ionized cluster beam technique, 402
physical properties of nitrogenated amorphous carbon films produced by ion-beam-assisted deposition, 85
synthesis and structural characterization of boron nitride thin films, 78
Planarization
Al planarization processes for multilayer metallization of quarter micrometer devices, 367
numerical simulations of thin film thermal flow, 419
Plasma processing and deposition
Al planarization processes for multilayer metallization of quarter micrometer devices, 367
bombardment and gas rarefaction effects on the properties of sputtered Ti thin films, 386
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source, 382
deposition of white diamond thin films by increasing the total pressure in a microwave-plasma-enhanced chemical vapour deposition system, 109
diamond coatings from a solid carbon source, 95
effects of substrate and annealing ambient on the electrical properties of Ta_2O_5 thin films prepared by plasma enhanced chemical vapor deposition, 435
elastic modulus of diamond-like carbon films prepared by pulsed vacuum arc, 125
properties of boron coatings used as plasma facing material of fusion device, 518
transport through multicomponent dual frequency plasma sheaths, 522
Platinum
microstructure and mechanical properties of sputtered platinum films, 344

Polymers
holographic and spectroscopic characterization of spiropyran doped poly(methyl methacrylate) films, 228
UV-radiation-induced degradation of fluorinated polyimide films, 430

Quantum effects
optical quantum size effects in diamond-like carbon superlattice structures, 20

Radiation damage
UV-radiation-induced degradation of fluorinated polyimide films, 430
Raman scattering
comparative study of trimethylboron doping of hot filament chemically vapour deposited and microwave plasma chemically vapour deposited diamond films, 136
electrical properties of diamond thin films grown by chemical vapor deposition technique, 141
optimizing the gas phase chemistry in a d.c. arcjet diamond chemical vapor deposition reactor, 103
Reaction kinetics
kinetics of Ni/a-Ge bilayer reactions, 456
thermal stability of silicide on polycrystalline Si, 479
Reflection spectroscopy
thickness dependence of the properties and thermal stability of PtSi films, 467
Rutherford backscattering spectroscopy
properties of silicon nitride films prepared by magnetron sputtering, 425

Schottky barrier
electrical and structural properties of buried $CoSi_2$ layers in Si(100) grown by molecular beam allotaxy, 485
Secondary electron emission
fabrication of an electron multiplier utilizing diamond films, 151
Semiconductors
characterization of p-$CuGa_{0.25}In_{0.75}Se_2$/n-$Zn_{0.35}Cd_{0.65}S$ polycrystalline thin film heterojunctions, 67
microstructure and thermal conductivity of epitaxial AlN thin films, 223
thermal stability of silicide on polycrystalline Si, 479
Silicides
chemical vapor deposition of $TiSi_2$ using SiH_4 and $TiCl_4$, 473
effect of dimension sealing on the nucleation of C54 $TiSi_2$, 451
electrical and structural properties of buried $CoSi_2$ layers in Si(100) grown by molecular beam allotaxy, 485
high resistivity Co and Ti silicide formation on silicon-on-insulator substrates, 462
thermal stability of silicide on polycrystalline Si, 479
thickness dependence of the properties and thermal stability of PtSi films, 467
TiN-capped $TiSi_2$ formation in W/$TiSi_2$ process for a quarter-micron complementary metal–oxide–semiconductor, 395
Silicon
amorphous Si thin films prepared by vacuum arc deposition, 62
characterization of laser-ablated boron nitride thin films on silicon, 243
selective electroless copper plating on silicon seeded by copper ion implantation, 391
thermal stability of silicide on polycrystalline Si, 479
Silicon carbide
effects of activated reactive evaporation process parameters on the microhardness of polycrystalline silicon carbide thin films, 212

Silicon nitride
properties of silicon nitride films prepared by magnetron sputtering, 425
Silicon oxide
advanced image processing in scanning probe microscopy, 318
characterization of TiO_2/SiO_2 multilayers by high resolution transmission electron microscopy and electron energy loss spectroscopy, 299
electrical properties of the p^+-gate electrode of an a-Si/poly-Si double layer, 413
numerical simulations of thin film thermal flow, 419
transport through multicomponent dual frequency plasma sheaths, 522
Silver
atomic-scale friction measurements of silver and chemisorbed oxygen surfaces, 190
Solar cells
characterization of p-$CuGa_{0.25}In_{0.75}Se_2$/n-$Zn_{0.35}Cd_{0.65}S$ polycrystalline thin film heterojunctions, 67
characterization of thin film ZnO/ZnCdS/$CuGaSe_2$ heterojunctions, 238
investigations on n-CdO/p-CdTe thin film heterojunctions, 339
preparation of milky transparent conducting ZnO films with textured surface by atmospheric chemical vapour deposition using $Zn(C_5H_7O_2)_2$, 14
Sputtering
atmosphere influence on in-situ ion beam analysis of thin film growth, 247
bombardment and gas rarefaction effects on the properties of sputtered Ti thin films, 386
diamond coatings from a solid carbon source, 95
microstructure and mechanical properties of sputtered platinum films, 344
preparation of conductive ZnO:Al films by a facing target system with a strong magnetic field, 9
properties of silicon nitride films prepared by magnetron sputtering, 425
residual stress in stabilized zirconia thin films prepared by r.f. magnetron sputtering, 349
single-phase polycrystalline $Ti_{1-x}W_xN$ alloys ($0 \leq x \leq 0.7$) grown by UHV reactive magnetron sputtering: microstructure and physical properties, 445
Stress
effects of collimation on intrinsic stress in sputter-deposited metallic thin films, 372
effects of electro- and stress migration forces on the $1/f\alpha$ noise of patterned thin metal films, 513
internal stress of chemical vapour deposition diamond film on silicon, 119
microstructure and mechanical properties of sputtered platinum films, 344
realistic electromigration lifetime projection of VLSI interconnects, 508
residual stress distribution in electroplated Zn–Ni alloy layer determined by X-ray diffraction, 356
residual stress in stabilized zirconia thin films prepared by r.f. magnetron sputtering, 349
Structural properties
annealing and Sb-doping of Sn–O films produced by filtered vacuum arc deposition: structure and electro-optical properties, 1
$Ba_xSr_{1-x}TiO_3$ thin films by a chemical process, 53
decorative optical coatings, 33
electrical properties of the p^+-gate electrode of an a-Si/poly-Si double layer, 413

synthesis and structural characterization of boron nitride thin films, 78
Sulphur
effects of hydrogen annealing, sulfur segregation and diffusion on the cyclic oxidation resistance of superalloys: a review, 285
Surface composition
atmosphere influence on in-situ ion beam analysis of thin film growth, 247
Surface energy
electrostatic-based model for alumina surfaces, 179
opening and closing of channels during phase transitions in Al–Mn thin films, 254
Surface morphology
advanced image processing in scanning probe microscopy, 318
deposition of white diamond thin films by increasing the total pressure in a microwave-plasma-enhanced chemical vapour deposition system, 109
morphology of Al–Ni–Ge ohmic contacts to n-GaAs as a function of contact composition, 490
preparation of milky transparent conducting ZnO films with textured surface by atmospheric chemical vapour deposition using $Zn(C_5H_7O_2)_2$, 14
surface morphology examination of sol–gel deposited TiO_2 films, 303
Surface roughness
coatings tribology: a concept, critical aspects and future directions, 173
Surface segregation
effects of hydrogen annealing, sulfur segregation and diffusion on the cyclic oxidation resistance of superalloys: a review, 285
Surface stress
residual stress in stabilized zirconia thin films prepared by r.f. magnetron sputtering, 349
Surface structure
atmosphere influence on in-situ ion beam analysis of thin film growth, 247
electrostatic-based model for alumina surfaces, 179

Tantalum
effects of substrate and annealing ambient on the electrical properties of Ta_2O_5 thin films prepared by plasma enhanced chemical vapor deposition, 435
Thermal desorption
chemical vapor deposition of $TiSi_2$ using SiH_4 and $TiCl_4$, 473
Titanium
bombardment and gas rarefaction effects on the properties of sputtered Ti thin films, 386
effects of collimation on intrinsic stress in sputter-deposited metallic thin films, 372
TiN-capped $TiSi_2$ formation in $W/TiSi_2$ process for a quarter-micron complementary metal–oxide–semiconductor, 395
Titanium nitride
comparison of chemical vapor deposition of TiN using tetrakis-diethylamino-titanium and tetrakis-dimethylamino-titanium, 440
single-phase polycrystalline $Ti_{1-x}W_xN$ alloys ($0 \leq x \leq 0.7$) grown by UHV reactive magnetron sputtering: microstructure and physical properties, 445
Titanium oxide
characterization of TiO_2/SiO_2 multilayers by high resolution transmission electron microscopy and electron energy loss spectroscopy, 299
growth of low and high refractive index dielectric layers as studied by in situ ellipsometry, 257
surface morphology examination of sol–gel deposited TiO_2 films, 303
Transmission electron microscopy
cross-section transmission electron microscopy observations of c-BN films deposited on Si by ion-beam-assisted deposition, 72
effects of ion beam irradiation on the properties and epitaxial growth of aluminium nitride film by the ion beam assisted deposition process, 47
formation of low pressure chemically vapour deposited W thin film on silicon dioxide for gate electrode application, 377
high resistivity Co and Ti silicide formation on silicon-on-insulator substrates, 462
Tribology
aspects of the surface roughness of ceramic bonding tools on a nanometer scale investigated with atomic force microscopy, 308
atomic-scale friction measurements of silver and chemisorbed oxygen surfaces, 190
coatings tribology: a concept, critical aspects and future directions, 173
triboscopic description of local wear phenomena under an AFM tip, 194
Tungsten
formation of low pressure chemically vapour deposited W thin film on silicon dioxide for gate electrode application, 377
realistic electromigration lifetime projection of VLSI interconnects, 508
single-phase polycrystalline $Ti_{1-x}W_xN$ alloys ($0 \leq x \leq 0.7$) grown by UHV reactive magnetron sputtering: microstructure and physical properties, 445

X-ray diffraction
comparative study of trimethylboron doping of hot filament chemically vapour deposited and microwave plasma chemically vapour deposited diamond films, 136
microstructural investigation of the κ-$Al_2O_3 \rightarrow \alpha$-$Al_2O_3$ transformation in multilayer coatings of chemically vapour deposited κ-Al_2O_3, 311
residual stress distribution in electroplated Zn–Ni alloy layer determined by X-ray diffraction, 356
residual stress in stabilized zirconia thin films prepared by r.f. magnetron sputtering, 349
thickness dependence of the properties and thermal stability of PtSi films, 467
X-ray photoelectron spectroscopy
nucleation studies of thin diamond films on model substrates, 114
properties of silicon nitride films prepared by magnetron sputtering, 425
UV-radiation-induced degradation of fluorinated polyimide films, 430

Zinc
gold and zinc thin films deposited by the ionized cluster beam technique, 402
non-alloyed, refractory metal contact optimization with shallow implantations of Zn and Mg, 496
Zinc oxide
a.c. properties of ZnO thin films prepared by r.f. magnetron sputtering, 529
preparation of conductive ZnO:Al films by a facing target system with a strong magnetic field, 9
preparation of milky transparent conducting ZnO films with textured surface by atmospheric chemical vapour desposition using $Zn(C_5H_7O_2)_2$, 14
